DETAILED ACTION

1. This application has been examined.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in-
- (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or
- (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).
- 3. Claims 1-28 are rejected under 35 U.S.C. 102(e) as being anticipated by Patterson et al (6122741).
- 4. Regarding claim 1, Patterson et al show a method for automatically determining from a plurality of display fields displayed on a computer monitor the location of first and second display fields with characteristics and a mutual predefined relationship (Figures 2, 3, 6, colum 2 lines 1-15), including: identifying the first display field among the plurality of display fields

Art Unit: 2174

based on the characteristic of the first display field (column 3 lines 25-40, 45-60), identifying the second display field from among the plurality of display fields based on the predefined relationship (column 4 lines 1-30, 40-53).

- 5. Regarding claim 2, the first display field is a password display field and the second is a user identification field (column 3 lines 30-40, column 4 lines 5-20).
- 6. Regarding claim 3, the identifying step monitors the fields and detects the field having the characteristic (the access right column 3 lines 20-40, or alternatively the logon information itself column 4 lines 5-19).
- 7. Regarding claim 4, the access rights (column 3 lines 20-40) are non-displayable attributes.
- 8. Regarding claim 5, an emulator generates fields on the monitor (column 3 lines 1-10), and the monitoring step examines a new display field in response to an interrupt generated when the cursor is positioned in a new display field (column 3 lines 7-12, column 4 lines 40-50, column 5 lines 10-20).

Art Unit: 2174

9. Regarding claim 6, the fields are monitored and it is determined which field has the predefined relationship (column 5 lines 9-25 and 45-55).

- 10. Regarding claim 7, a new display field is monitored when an interrupt is generated by positioning the cursor in the new field (column 6 lines 19-35).
- 11. Regarding claim 8, the predefined relationship is that the second field is the first non empty field preceding tehe first field (column 4 lines 5-21).
- 12. Regarding claim 9, the predefined relationship is that the second field is positioned a predetermined number of fields from the first field (column 4 lines 22-40).
- 13. Regarding claim 10, the predetermined number of fields are of non empty fields (column 4 lines 20-45 the logon and access fields are nonempty).
- 14. Claims 11-28 show the same features as above and are rejected for the same reasons.
- 15. Any inquiry concerning this communication should be directed to Steve Sax at telephone number (703) 305-9582.
